Gold Sponsor

Optomec is a privately-held, rapidly growing supplier of Additive Manufacturing systems. Optomec's patented Aerosol Jet Systems for printed electronics, and LENS and Huffman brand 3D Printers for metal component production and repair, are used by industry to reduce product cost and improve performance. Together, these unique printing solutions work with the broadest spectrum of functional materials, ranging from electronic inks to structural metals and even biological matter. Optomec has delivered more than 500 of its proprietary Additive Manufacturing systems to more than 200 marquee customers around the world, for production applications in the electronics, energy, life sciences and aerospace industries. Our users include countless blue-chip manufacturing companies, such as GE, Samsung, Raytheon, Siemens, Lockheed and LiteOn, as well as the US Air Force, US Navy, US Army and NASA.

Silver Sponsors

Serving the semiconductor and high technology industries, SiSTEM Technology is an established distributor of capital equipment, ancillaries and consumables, as well as offering specialist services to these industries. From our headquarters in the UK, at Caswell Science Park, we supply our extensive range of products throughout the UK, Europe and the Nordic countries.

Atomic Layer Deposition [ALD] systems, Additive/3D Manufacturing, Automated photolithographic process equipment, Wafer, Mask and Substrate handling and automation, Bench-Top Spin Coat, Develop, Clean systems, Bake systems, Temporary Bond and De-Bond systems, Indium Bump Deposition, Physical Vapour Deposition [PVD], Ion Beam Sputter/Etch, Diamond-like Carbon, Megasonics Cleaning systems, Furnace Elements and Thermal Processing solutions, Probe Needle, Test Socket cleaning, Chuck Cleaning Wafers, Process Heating and Heat Exchange systems, Power supplies and Controls, Manual & Automated Wet Benches and Fume Hoods and Chemical Delivery systems, , Mask Aligners etc.

CPI acts as a catalyst bringing together academia, businesses, government and investors to translate bright ideas and research into the marketplace. We do this by giving our customers access to the right experts, equipment, networks, funding and more – connecting the dots for effective innovation.

We are a leading independent technology innovation centre and a founding member of the UK Government's High Value Manufacturing Catapult. Established in 2004, our teams tirelessly apply their many years of experience to ensure that every great invention gets the best opportunity to become a successfully marketed product or process. We work with our partners across diverse markets in the UK and around the world, driving their innovations forward and helping them to reduce the risk and cost associated with product development.

Pro-Lite is a UK-based supplier of specialist equipment and services with a technical focus in the following areas of photonics: instruments for measuring light and the optical properties of materials; photometry; lasers and laser safety equipment; opto-mechanics and nano-positioning equipment; optics and optical materials; and spectroscopy and spectral imaging.

Pro-Lite provides solutions for almost any application in measuring the colour and brightness of light sources and displays. From simple, inexpensive lux meters, to the world's most advanced imaging photometers, we have a light meter that you can rely upon to give you accurate, repeatable data. Our repertoire includes instruments that measure the amount of light (radiometers, photometers, spectroradiometers), the colour of light (colorimeters), the temporal behaviour of the light source (flicker photometers), the angular distribution of light (goniophotometers) as well as the 2D spatial distribution of light (imaging photometers & colorimeters).

Printed Electronics Limited (PEL) is a manufacturer and product and process development company. We focus on commercial applications of material deposition, electronic design, sales of materials and print platforms, and industrial training. In addition to manufacturing our own line of products, we represent a range of Printed Electronics equipment vendors including Superfine-Inkjet (SIJ), high performance screen- printing (Microtec), 5 axis printing (Neotech AMT), Aerosol - IDS Nanojet, Inkjet-platforms (Integrity), and more.

We manufacture in the UK midlands and support fast-turnaround production of screen- printed, Piezojet and inkjet-printed devices.

Semilab provides state-of-the-art metrology solutions for semiconductor device manufacturers, both in-line and R&D segments, and are the world leader in non-contact electrical metrology, as well as contact type and optical technologies.

We improve and expand our measurement techniques by matching key process monitoring needs and more efficient production of semiconductor devices including microchips, flat panel displays and solar cells. You can select from a variety of integration capabilities ranging from handheld devices, table-top systems all the way to fully automated stand-alone production control tools.

Semilab's highly configurable solutions can support your advanced process control in the field of silicon and wide-bandgap materials' characterization, defect detection, wafer sorting and thin film or large area substrate measurements.

COMSOL is a global provider of simulation software for product design and research to technical enterprises, research labs and universities. Its COMSOL Multiphysics® product is an integrated software environment for creating physics-based models and simulation applications. A particular strength is its ability to account for coupled or multiphysics phenomena. Add-on products expand the simulation platform for structural, electromagnetics, acoustics, heat transfer, chemical and fluid flow applications. Interfacing tools enable the integration of COMSOL Multiphysics simulations with all major technical computing and CAD tools on the computer-aided engineering (CAE) market. Simulation experts rely on COMSOL Compiler™ and COMSOL Server™ to deploy applications to their design teams, manufacturing departments, test laboratories and customers throughout the world.

+ Over 100 years spent in the relentless pursuit of quality, innovation and reliability. We are Emerson and Renwick, known to many as E+R, a privately owned, independent equipment engineering company.

The company has grown and developed across a number of market sectors and is positioned as a leading manufacturer of sophisticated roll-to-roll production machinery.

We have built a reputation for engineering, technology and process innovation and use the experience gained across a hugely diverse range of applications to support developments for ever more demanding processes and products.

Innovation lies at the heart of everything we do, whether creating new enabling technologies or refining processes to enhance capabilities and productivity. When needed we work with strategic partners to integrate sophisticated and complex source technologies to our platforms.

E+R has achieved growth into new marketplaces by diversification and by embracing new and developing technologies and secured its position within existing markets with the innovation of products and processes.

A key factor has been our success in the recruitment and development of highly skilled technical personnel across a wide range of capabilities and competencies.
